DETAILED ACTION

Election/Restrictions

Applicant's election of Group Ia, Claims 1-10 in the reply filed on 1-20-06 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Drawings

The drawings are objected to because:

- 1) feature C is not shown but is listed in paragraph 37 in the specification and
- 2) the correct location of feature A is not shown but listed in paragraph 37 as described in the specification; and
- 3) the ridges in the notch (10) of the sputter target (4) vis a vis the flange (8) of the backing plate (6) because the ridges cannot fit inside the flange of the backing plate.

Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from

Art Unit: 1725

the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Qamar (US 5,009,765). Qamar teaches a method for forming a solder bonded sputter target/backing plate assembly forming a backing plate with a bonding surface having at least two spaced-apart peripheral flanged segments disposed on the bonding surface of the backing plate (figure 8, items 80 and 40); b) forming a sputter target having a sputter surface and at least two peripheral notched segments on the bonding surface and said notched segments adapted for aligning with the flange segments (figure 8, item 10); c) applying a solder material to the interface spacing defined by superimposing and aligning said sputter target on the backing plate and said flange

Application/Control Number: 10/670,460

Art Unit: 1725

segments having a height thickness larger than the depth thickness of the notched segments (col. 5, ll. 5-15); and d) allowing said solder material to solidify and bond the sputter target to the backing plate (col. 5, ll. 5-15); wherein the backing plate and sputter target are disc-shaped (figure 1); wherein the flange segments form a single arcuate-shaped flange and the notched segments form a single arcuate-shaped notch (figure 8, items 10 and 40); wherein the sputter target is selected from the group comprising titanium, aluminum, copper, molybdenum, cobalt, chromium, ruthenium, rhodium, palladium, silver, osmium, iridium, platinum, gold, tungsten, silicon, tantalum, vanadium, nickel, iron, manganese, germanium, and alloys thereof and the backing plate is selected from the group comprising copper, aluminum, titanium, and alloys thereof (col. 5, ll. 35-45).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Qamar (US 5,009,765). Quamar does not teach the claimed ranges, however, Quamar does teach the desirability of effectively soldering the target to the backing plate (col. 5, ll. 5-15) using substantially the same process as applicants. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify dimensions to utilize the claimed dimensions in

Application/Control Number: 10/670,460

Art Unit: 1725

order to effectively bond the target to the backing plate (see Quamar col. 5, ll. 5-15).

Alternatively, it would have been obvious to one of ordinary skill in the art at the time of the invention to choose the instantly claimed ranges through process optimization, since it has been held that there the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. See <u>In re Boesch</u>, 205 USPQ 215 (CCPA 1980).

Allowable Subject Matter

Claims 8-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not suggest or teach the claimed ridge having the claimed width.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Johnson whose telephone number is 571-272-1177. The examiner can normally be reached on M-Th 7:30 AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pat Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
